# ***District of Columbia***

## ***ICH Strategic Planning Committee***

***November 27, 2018***

# Meeting Agenda

- I. Welcome/Introductions
- II. Homeward DC Modeling Update  
(Continued From Last Month)
  - Families
  - Singles
- III. Procurement Updates
- IV. Other Committee Updates
- V. Summary & Adjourn

# Process for Updating the Plan

- ❖ We are in our 4<sup>th</sup> implementation year (FY19) but planning for our 5<sup>th</sup> budget year (FY20)
- ❖ The ICH did internal updates along the way to track progress, but it's time for a public update.
  - Landscape has shifted; many lessons learned.
- ❖ Goal is to have an updated plan by early 2019.
- ❖ Proposed process:
  - Discussion on family system inputs/assumptions today
  - Singles issues (more complicated) need to go to work group
  - Bring back updated model for November meeting
  - Draft narrative Dec/Jan
- ❖ But what about FY19 budget?

# Reorientation to the Model: Purpose

- ❖ To have a data-driven process for informing our budget asks.
- ❖ To help us understand how landscape changes & investment levels impact our system.
- ❖ Serves as a tool/guide.
  - There are endless scenarios – not an exact science.
  - Balancing historical data against aspirational targets as we navigate change.
  - Be cautious in how you frame during advocacy.

# Reorientation to the Model: Key Data Inputs

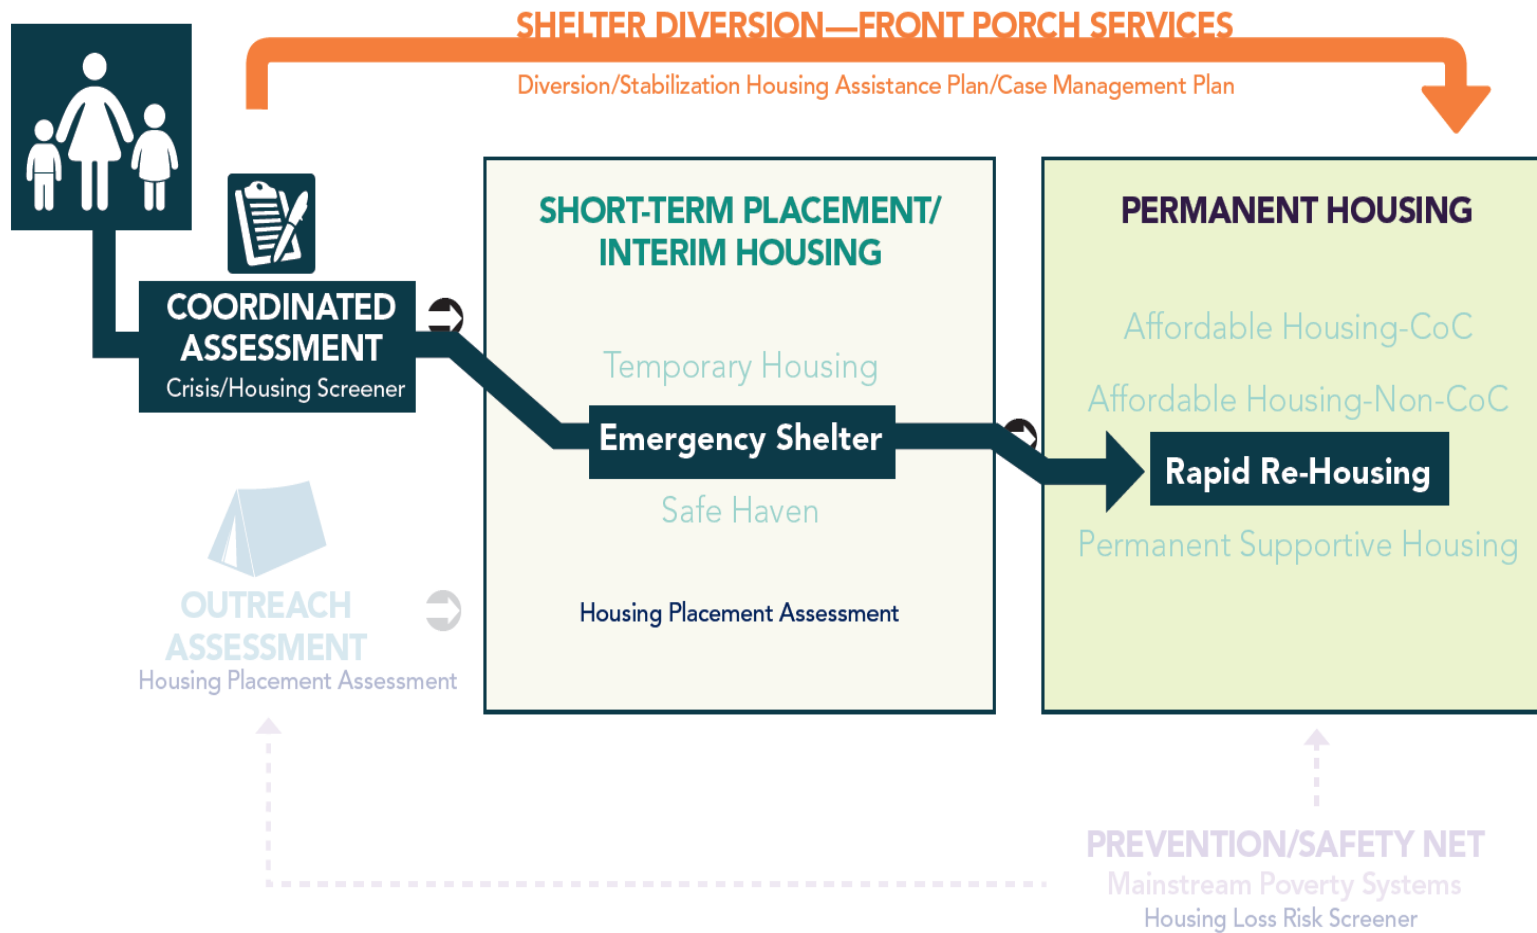

- ❖ Households/persons in systems at a point in time
- ❖ Unique households/persons served annually
- ❖ Long-term/chronic households
- ❖ Pathways Assumptions
  - How do different people move through the system from homelessness to permanent housing?
  - Which programs do they use?
- ❖ Length of Stay Assumptions
  - How long do people stay at each step?

# Pathways Assumptions

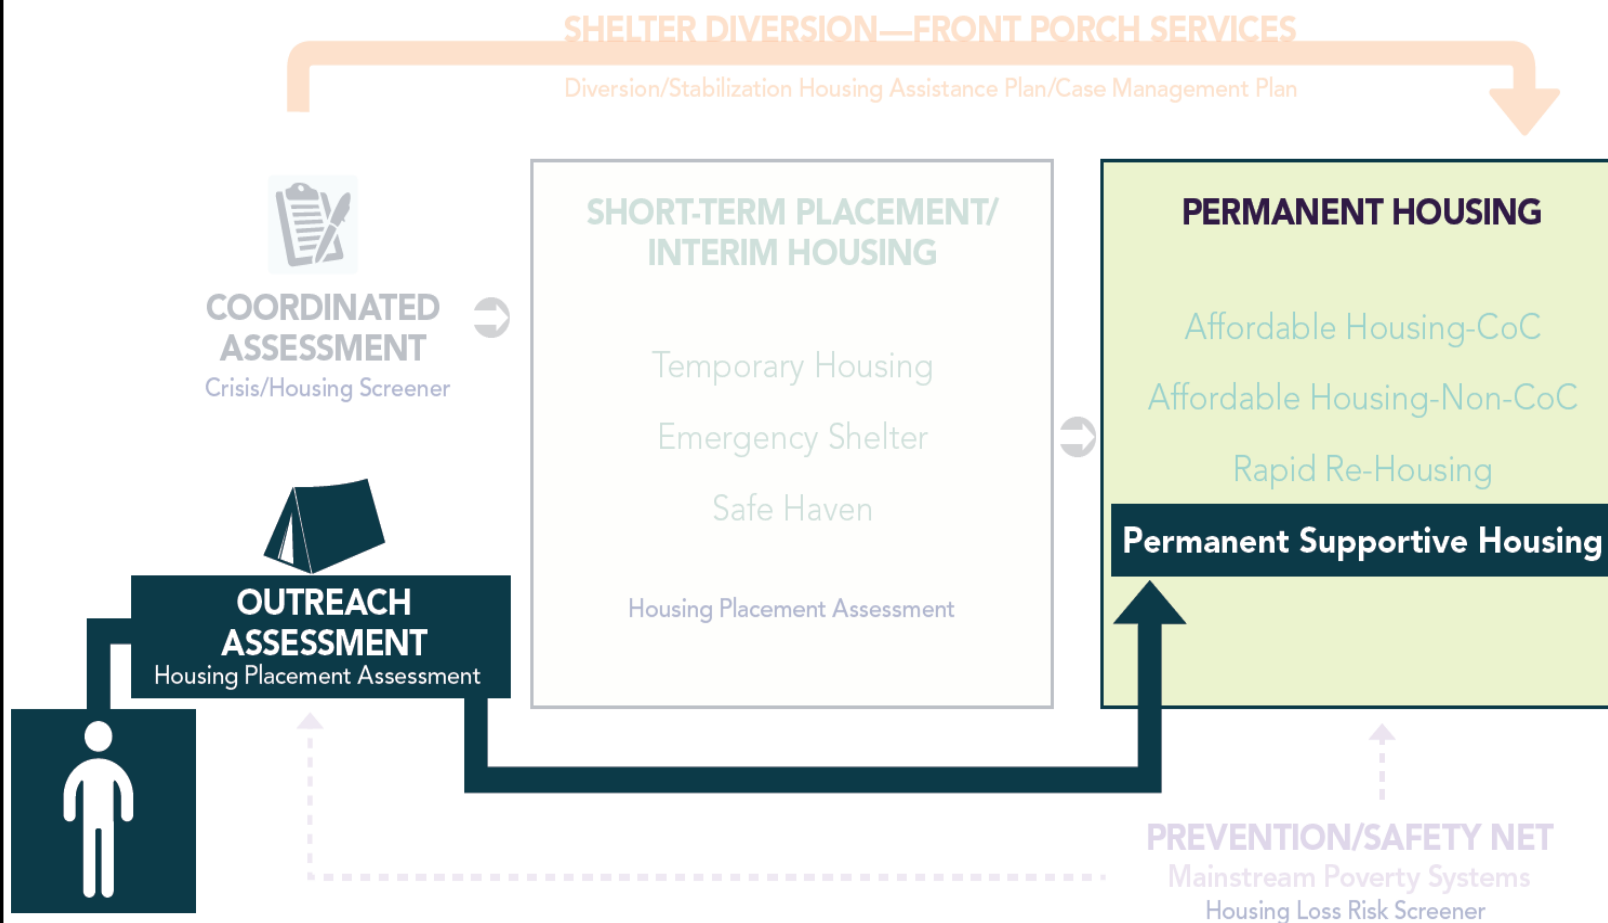

## FAMILY A

# Pathways Assumptions

## SINGLE MAN C

# Family System: Original Modeling (2015)

## 2016: Assumptions about Service Strategies and % Anticipated to Need Each to Exit Homelessness

Service Strategies	Families		Projected System Utilization (Av Months of Asst in ea Prog Type)						
	Overall Strategy (%)	Detail Strategy (%)	Emergency Shelter	Transitional Housing	Rapid Re-Housing	Rapid Re-Housing Intensive	Permanent Supportive Housing	TAH	Shelter Diversion
<b>Strategies for People Presenting Each Mo</b>									
Shelter Diversion	5%	5%							4
Emergency Shelter Only	3%	3%	1						
TH only (not through ES)	20%	0%							
TH (through ES)		10%	6	12					
TH w RRH at Exit		10%	6	12	9				
RRH (one-time asst)	63%	3%	6		1				
RRH (med-term asst)		40%	6		12				
RRH (med-term asst) w TAH at Exit		10%	6		12			1	
RRH Intensive		10%	6			18			
PSH (via ES)	9%	9%	6				1		
TOTAL	100%	100%							

# 2015 Family System Assumptions

- ❖ Shelter: Assumed declining Average Length of Stay (ALOS) in shelter
  - Assumed 3 month average LoS by FY19
  - Moving forward, use historical data or aspirational targets?
- ❖ Transitional Housing: Fairly high reliance on Transitional Housing (TH) in original model (assumed 20% would need TH)
  - How have we been using our TH stock?
  - How should we be using it?
  - One-quarter of families headed by 18-24 year old. Is there a bigger role for TH for youth-headed households?

# 2015 Family System Assumptions (Cont.)

- ❖ Rapid Re-Housing: Assumed shorter ALOS in Rapid Re-Housing programs
  - Assumed a small amount of families (3%) would receive one-time assistance.
  - Assumed 12 month ALOS for majority (two-thirds) of families in RRH.
  - Also assumed an “intensive” model of 18 months for 10% of families (18 months has been our system-wide average).
  - We were not using progressive engagement model at the time, so we did not account for families entering RRH and then being stepped up.
  - Result: we underestimated number of RRH slots we would need, which has been particularly difficult to address on case management side.

# 2015 Family System Assumptions (Cont.)

- ❖ Shelter Only: Significant percentage of families leave shelter to unknown destinations
  - Need to account for this in the model?
- ❖ Long-Term Housing Assistance: Assumed 10% of families would need to step up from RRH to TAH, and 9% of families would need PSH.
  - 2018 F-SPDAT Assessment Data: 71% of families scoring for RRH, and 18% of families scoring for PSH.
  - 2018 PIT Data: 15.4% report disabling or health condition.
  - System utilization FY15-FY18: 11% exited to PSH; 9.1% to TAH.

# 2018 PIT Data

## Disabilities and Health Conditions

<i>Disabling Conditions</i>	<i>Single Adults</i>	<i>Adults in Families</i>	<i>Total (All Adults)</i>
<b>Chronic Substance Abuse (CSA)*</b>	30.4%	1.7%	23.4%
<b>Severe Mental Illness (SMI)*</b>	32.4%	7.4%	26.3%
<i>Dual Diagnosis (subset living with both CSA &amp; SMI)</i>	14.5%	1.2%	11.3%
<b>Chronic Health Problem</b>	24.6%	1.5%	19.0%
<b>Developmental Disability</b>	4.9%	1.5%	4.0%
<b>Physical Disability</b>	18.0%	3.1%	14.4%
<b>Living with HIV/AIDS</b>	4.0%	0.2%	3.1%

\* CSA & SMI are not mutually-exclusive and include those with both (Dual Diagnosis).

# Family System Assumptions: Proposed for Update

## 2020: Assumptions about Service Strategies and % Anticipated to Need Each to Exit Homelessness

Service Strategies	Families		Projected System Utilization (Avg Months of Asst in each Program Type)					
	Overall Strategy (%)	Detail Strategy (%)	Emerg. Shelter	Transtnl Housing	RRH	RRH Intensive	PSH	TAH
<b>Strategies for People Presenting Each Mo</b>								
Shelter Diversion	0%	0%						
Emergency Shelter Only	25%	25%	12					
TH only (not through ES)	14%	0%						
TH (through ES)		2%	6	12				
TH w RRH at Exit		12%	6	12	12			
RRH (one-time asst)	58%	0%						
RRH		40%	12		18			
RRH w/ TAH at Exit		10%	12		12			1
RRH w/ PSH at Exit		8%	12				1	
PSH (via ES)	3%	3%	12				1	
<b>TOTAL</b>	<b>100%</b>	<b>100%</b>						

# Family System Assumptions: Proposed for Update

- ❖ Zero out prevention/diversion
  - Model is based on PIT & AHAR data (new entries into shelter each year). Families diverted happens “pre-model.”
- ❖ Account for families exiting shelter without other interventions
- ❖ Right size use of Transitional Housing
  - Assumed half of Youth-Headed Households would benefit from TH (about 14% of total population)
- ❖ Eliminate RRH Intensive from model (no distinct group; having a separate category unnecessarily complicates the model)
- ❖ Show two scenarios for Average Length of Stay (ALOS) in shelter & RRH
  - Current ALOS, declining ALOS
- ❖ Keep PSH assumptions same (~10%)
  - Assume 10-20% of PSH placements happen from shelter, and remaining 80-90% happen via step-up from RRH.
- ❖ Keep TAH assumptions (~10%). Continue to assume placements happen via step up from RRH.

# Single Adult System: Original Modeling (2015)

## 2016: Assumptions about Service Strategies and % Anticipated to Need Each to Exit Homelessness

Service Strategies	Individuals		Projected System Utilization <sup>a</sup>						
	Overall Strategy (%)	Detail Strategy (%)	Outreach Beds (Av Mths)	Emerg Shelter (Av Mths)	Transtnl Housing (Av Mths)	RRH (Av Mths)	PSH (Units)	TAH (Units)	Diversion (Av Mths)
<b>Strategies for People Presenting Each Month</b>									
Prevention Diversion (med-term)	10%	10%							4
Emergency Shelter Only	30%	30%		3					
TH (direct from CA)	10%	0%							
TH (through CA or via ES)		8%		3	12				
TH (via ES) w TAH at Exit		2%		3	12			1	
RRH (one-time asst)	45%	8%		3		1			
RRH (med-term asst)		35%		3		9			
RRH (med-term asst) w TAH at Exit		2%		3		9		1	
PSH (from street, using outreach beds)	5%	0%							
PSH (via ES)		5%		4			1		
<b>TOTAL</b>	<b>100%</b>	<b>100%</b>							

<b>Strategies for Long-term Homeless</b>									
TAH (via ES)	0%	0%						1	
Remaining Unhoused (in/out of ES)	67%	67%		6					
PSH (via ES)	28%	18%		6			1		
PSH (via streets)		10%					1		
RRH	5%	5%				12			
<b>TOTAL</b>	<b>100%</b>	<b>100%</b>							

# 2015 Assumptions for Single Adults

- ❖ Shelter diversion: Assumed that we could divert at least 10% of single adults from shelter with no further intervention.
  - Shelter diversion was not funded until FY19; may be able to keep assumption the same since program has now been stood up.
- ❖ Shelter Only: Assumed approximately one-third of single adults would self-resolve.
  - Based on 2018 inflow analysis, these individuals are only using shelter for short amounts of time each year, but most are not self-resolving.
  - Have to determine how to treat this group in the model.

# 2015 Assumptions for Single Adults

- ❖ RRH: Assumed 45% of single adults would be able to end their homeless episode with short-term support.
  - This assumption may be valid, but this would require over 2,500 slots of RRH.
  - We could not scale our RRH programming that quickly.
  - Therefore, the model has to account for any individuals who need (but will not receive) a housing resource in the “shelter only” line until housing resources can be scaled.

# 2015 Assumptions for Single Adults

- ❖ Long-Term Homeless: We assumed there was a group of individuals experiencing long-term homelessness that looked different than those newly entering the system.
  - Assumed this group was roughly equivalent to our chronically homeless population.
  - We assumed a majority would need PSH, but based on assessment scores, thought some could resolve their homelessness with RRH or TAH.
  - We assumed we could address the needs of this group in three years (i.e., a three year surge).
  - Resources have *not* been targeted appropriately to address this group; therefore we still have a group of individuals experiencing long-term homelessness.

# 2015 Assumptions for Single Adults

- ❖ Transitional Housing: We assumed TH could/would be a “therapeutic” model.
  - Need to right size our use of TH.
  - Differences here for men vs women?
- ❖ TAH: Clients haven’t done as well in TAH as anticipated.
  - Is this because of poor targeting, or because greater level of service is needed at the outset?

# Single Adult System: Proposed for Update

## Assumptions about Service Strategies and % Anticipated to Need Each to Exit Homelessness (Programming Fully Scaled)

Service Strategies	Individuals		Projected System Utilization <sup>a</sup>						
	Overall Strategy (%)	Detail Strategy (%)	Outreach Beds (Av Mos)	Emerg Shelter (Av Mos)	Tran Housing (Av Mos)	RRH (Av Mos)	PSH (Units)	TAH (Units)	Diversion (Av Mos)
<b>Strategies for People Presenting/Month</b>									
Prevention Diversion (med-term)	12%	12%							4
Emergency Shelter Only	12%	12%		3					
TH (direct from CA)	6%	0%							
TH (through CA or via ES)		5%		3	12				
TH (via ES) w TAH at Exit		1%		3	12			1	
RRH (one-time asst)	42%	0%							
RRH (med-term asst)		40%		3		6			
RRH (med-term asst) w TAH at Exit		2%		3		6		1	
PSH (from street, using outreach beds)	28%	3%							
PSH (via ES)		25%		4			1		
<b>TOTAL</b>	<b>100%</b>	<b>100%</b>							

<b>Strategies for Long-term Homeless</b>									
TAH	0%	0%							
Remaining Unhoused (in/out of ES)	0%	0%							
PSH (via ES)	100%	100%		6			1		
PSH (via Streets)		0%							
RRH	0%	0%							
<b>TOTAL</b>	<b>100%</b>	<b>100%</b>							

# Single Adult System: Proposed for Update

- ❖ Long-Term Homeless: We still think there is a group of individuals in the system that looks different from new inflow.
  - Need to revisit size of this group (analysis underway).
  - Assume 100% will need PSH.
- ❖ Shelter Only vs. Self-Resolves: Suggest adding a separate row for individuals we think actually self resolve (10-12%) versus those that are only using shelter during the year but likely to be in system the following year.
